

MINISTRY OF EDUCATION AND TRAINING
QUY NHON UNIVERSITY

UNDERGRADUATE PROGRAM

Level:	Undergraduate
Major:	Software Engineering
Specicality:	Software Engineering
Program code:	7480103
Mode of study:	Full-time

Gia Lai, 2025

UNDERGRADUATE PROGRAM

*(Issued in conjunction with Decision No. 2094/QĐ-ĐHQN dated July 22, 2025
by the Rector of Quy Nhon University)*

Level:	Undergraduate
Major:	Software Engineering
Speciality:	Software Engineering
Program code:	7480103
Mode of study:	Full-time

1. PROGRAM OBJECTIVES (POs)

1.1. General objectives

The Software Engineering program aims to cultivate high-quality human resources characterized by political integrity and professional ethics. Graduates shall possess a robust foundation in computer science and software engineering, enabling them to design, construct, implement, manage, and maintain medium-to-large-scale software systems.

Upon graduation, students shall be capable of:

- Operating effectively within modern software technology environments at domestic and international enterprises.
- Engaging in research and development or pursuing advanced academic degrees in Information Technology and Software Engineering.
- Adapting rapidly to technological shifts through self-study, independent research, and innovation.
- Meeting the demands of the labor market and society during the era of digital transformation and the Fourth Industrial Revolution (Industry 4.0).

1.2. Specific objectives

The program provides learners with:

- 1) PO1: The ability to apply specialized knowledge to design, develop, implement, and maintain high-quality software systems that meet technical, user, and market requirements.
- 2) PO2: Professionalism in technology organizations, businesses, or academic and research environments, serving as software engineers, project managers, software architects, testers, or system analysts.

- 3) PO3: Competencies in innovation, digital skills, entrepreneurial mindset, and lifelong self-learning.
- 4) PO4: Professional ethics, responsibility, and a sense of community service.
- 5) PO5: Critical and creative thinking skills to analyze, propose, and implement innovative technological solutions for practical problems.

2. JOB OPPORTUNITIES AND PROFESSIONAL DEVELOPMENT

Upon completion of the program, graduates are qualified to assume the following professional roles and pursue advanced academic pathways:

Professional career trajectories

- Information technology and digital transformation enterprises: Graduates may serve as Software Developers/Engineers, Quality Assurance (QA) Engineers, DevOps Engineers, Embedded Software Engineers, System Integration Engineers, Business Analysts (BA), Software Architects, Information Security Specialists, and Software Project Managers.
- Public sector, financial institutions, and conglomerates: Opportunities include roles as IT Specialists, Internal Application Developers, and Consultants for enterprise management solutions (e.g., ERP, CRM).
- Global and multinational environments: Qualifications extend to roles within international organizations, including global operations, offshore development, software outsourcing, and remote positions for international firms.
- Technological entrepreneurship (Startups): Graduates possess the capacity to co-found ventures, develop proprietary software products, or serve as Technical Leads within innovative startup ecosystems.

Advanced academic and professional development

- Postgraduate education: Eligibility for Master's and Doctoral programs in specializations such as Computer Science, Software Engineering, Artificial Intelligence, Big Data, Information Security, and Technology & Innovation Management.
- Research and specialized training: Engagement in international academic partnerships, research fellowships, or intensive training programs at domestic and foreign institutions, as well as the attainment of advanced professional certifications.

3. PROGRAM DURATION AND TOTAL ACADEMIC WORKLOAD

3.1 Program duration: 4.5 years

3.2 Total academic workload: 150 credits (*excluding Physical Education and National Defense and Security Education*)

No.	Knowledge block	Number of Credits	
		Compulsory	Elective
1	<i>General Education Knowledge</i>	24	0
1.1	Political Science and Law	13	0
1.2	Foreign Languages	7	0
1.3	Social Sciences / Mathematics, Natural Sciences - Environment, Management Science	4	0
2	<i>Professional knowledge</i>	111	15
2.1	Fundamental knowledge	55	0
2.2	Specialized knowledge	35	15
2.3	Supplementary knowledge	5	0
2.4	Internship	8	0
2.5	Bachelor project	8	0
Total:		135	15
		150	

4. ADMISSION REQUIREMENTS

Applicants must have graduated from high school or possess an equivalent qualification in accordance with current admission regulations. Candidates should demonstrate a profound interest in their chosen field, maintain good health, and exhibit strong political integrity, ethical character, and a high sense of social responsibility. Furthermore, applicants are expected to have a solid command of high school knowledge, the capacity for independent work, creative thinking, and scientific research aptitude. Adaptability to the evolving technological landscape and global digital transformation is also a fundamental requirement.

5. TRAINING METHOD, GRADUATION REQUIREMENTS

5.1 Training method: Full-time

5.2 Graduation requirements:

- *Academic qualifications*: Candidates must successfully accumulate the required number of modules and the total workload as specified in the educational program. A minimum cumulative Grade Point Average (GPA) of 2.00 for the entire course of study is mandatory.
- *Program learning outcomes*: Candidates must satisfy all defined Program Learning Outcomes (PLOs).
- *Certifications and proficiency*: Candidates must possess valid certificates in Physical Education and National Defense - Security Education. Additionally,

they must meet the foreign language proficiency standards as prescribed by the University's regulations.

6. TEACHING METHODS AND LEARNING ASSESSMENT

6.1. Teaching methods

The pedagogical approaches employed in the Software Engineering program encompass a diverse range of teaching and learning activities. These methods are designed not only to equip students with core professional expertise and social knowledge but also to develop the capacity to apply this knowledge within collaborative environments. Consequently, students cultivate essential interpersonal skills such as communication, negotiation, and teamwork. Specifically:

- *Direct Instruction:*

Direct instruction is a pedagogical methodology in which information is conveyed directly to learners through instructor presentations and student observation. This approach is typically applied in traditional classroom settings and achieves optimal effectiveness when instructors need to impart foundational concepts or demonstrate new skills. The primary teaching methods include: Lectures and Guest Lectures.

- *Indirect Instruction:*

Indirect instruction is a learner-centered approach that facilitates the learning process without overt instructional activities by the educator. In this process, the instructor does not directly transmit the lesson content; instead, learners are encouraged to participate actively, employing critical thinking skills to resolve complex problems. The primary teaching methods include: Case-Based Learning, Problem-Based Learning, and Inquiry-Based Learning.

- *Experiential Learning:*

Experiential learning is a methodology where learners acquire knowledge and skills through practical experience, field observation, and sensory perception—essentially "learning by doing." The primary teaching methods include: Experiential Learning activities, Internships, Field Trips, Simulations, and Practical Exercises.

- *Interactive Instruction:*

Interactive instruction involves a combination of classroom activities where the instructor poses problems or open-ended questions, requiring learners to engage in discussion and debate. In the role of a facilitator, the instructor supports students step-by-step in problem-solving to achieve learning objectives. Learners may acquire knowledge from peers or instructors to develop social skills, critical thinking, communication, and negotiation skills in decision-making. The primary teaching methods include: Interactive Lectures, e-Learning, and Group Exercises.

– *Self-Directed Study:*

Self-directed study refers to all learning activities conducted by individual learners with minimal to no direct supervision from an instructor. This process enables learners to navigate their own learning paths based on personal experience, demonstrating autonomy in managing academic activities through assignments, projects, or problems suggested by the instructor. The primary strategies in this category include: Work Assignments and Self-Directed Learning.

6.2. Learning assessment

*** Grading scale:**

A 10-point scale is applied to all forms of assessment within the modules.

*** Assessment formats, criteria, and weighting:**

a) Theoretical modules:

- Assessment Formats: Written examinations (essays), oral examinations, practical tests, and term papers/projects.
- Assessment Criteria: Evaluations are conducted based on the official marking schemes and answer keys of the examination papers.
- Weighting: Scoring weights are determined as proposed in the detailed course syllabus, with the final examination accounting for a minimum of 50%. (Common weighting configurations in the educational program include Midterm-Final ratios of 30%-70%, 40%-60%, and 50%-50%).

b) Practical modules:

Students are required to attend all laboratory and practical sessions. The final grade for practical modules is the arithmetic mean of all practical exercise scores during the semester, rounded to one decimal place.

c) Course projects, introductory internships, and graduation internships:

The final evaluation consists of 50% formative assessment (process grade) and 50% oral examination.

d) Graduation thesis:

The assessment is conducted in accordance with the Undergraduate Training Regulations issued under Decision No. 1487/QĐ-ĐHQN dated July 1, 2021, by Quy Nhon University.

*** Assessment methods:**

The assessment framework utilized in the Software Engineering program is categorized into two primary types: Formative Assessment and Summative Assessment.

* Notes: Classification of academic components (knowledge blocks) is described as follows:

Category	Knowledge block
1	General Education Knowledge
2	Fundamental knowledge
3	Specialized knowledge
4	Supplementary knowledge
5	Graduation (Graduation Internship / Graduation Project)

9. GUIDELINES FOR PROGRAM IMPLEMENTATION

- This educational program is applicable to students enrolled in the Software Engineering major starting from the 2025 intake.
- The training process is governed by the prescribed curriculum design, educational objectives, target learners, human resource requirements, and specific pedagogical standards. Regarding elective modules, the Department shall provide academic consultancy to assist students in selecting appropriate courses, contingent upon contemporary developmental trends and societal demands.
- The Dean of the Department is responsible for the organization and oversight of the development of detailed course syllabi. This ensures that all educational objectives, core content, and academic requirements are fulfilled, while simultaneously addressing the needs of both learners and society.
- The educational program shall undergo formal review and updates at least once every five years to ensure alignment with the advancements in the field of Software Engineering and to remain consistent with socio-economic development requirements./.

Gia Lai, July 22, 2025

DEAN OF DEPARTMENT

**HEAD OF TRAINING
OFFICE**

**BY THE DELEGATION
OF THE RECTOR
VICE-RECTOR**

Dr. Le Xuan Viet

Dr. Le Xuan Vinh

Dr. Dinh Anh Tuan
